

### REASONS TO CONSIDER

#### High Growth Potential

The global robotics market was valued at more than \$23bn in 2020, with forecasts suggesting it could nearly triple to \$74bn by 2026.<sup>(1)</sup>

#### Compelling Economics

The average cost of an industrial robot declined from \$46k in 2010 to just \$27k in 2017 – and is forecasted to dip below \$11k by 2025 as technology improves and scales, allowing for broader adoption across industries.<sup>(2)</sup>

#### Unconstrained Approach

Robotics & AI have wide-reaching application, extending far beyond industrial activity. BOTZ invests accordingly, with global exposure across multiple sectors and industries.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Beginning October 15, 2020, market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share. Prior to October 15, 2020, market price returns were based on the midpoint between the Bid and Ask price. NAVs are calculated using prices as of 4:00 PM Eastern Time. The returns shown do not represent the returns you would receive if you traded shares at other times. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.
